

STAY SECURE

MOBILE APPLICATION SECURITY ASSESSMENT

Customer demands to conduct business on mobile devices have caused organizations to shift to a mobile-first strategy. Mobile applications and platforms must maintain trust to keep users. Deja vu Security can help your organization design and implement this growing mobile presence with time-tested security experience and industry leading best practices.

Concerns

- The rate of adoption for mobile devices by users is pressuring organizations to change how they conduct and manage their businesses
- Mobile platforms introduce new features frequently, presenting new challenges for organizations attempting to do what's best for their organizations and users
- Attacks targeting mobile environments are on the rise, with millions of samples being identified annually in public application marketplaces

Solution

Deja vu Security can help your organization integrate security throughout the software development lifecycle of your mobile applications. Our multifaceted approach enables organizations to find flaws earlier, and we provide guidance to ensure these threats are understood and properly mitigated with industry leading best practices for common attacks. Our process identifies weaknesses in your applications and frameworks. We strengthen your design and implementation, ensuring your customers do not fall victim to new attack trends.

We assist organizations by creating test plans to measure test coverage of an application's attack surface over time. Our engineers coordinate with internal staff to simulate attack scenarios against production or near-production environments in a safe and controlled manor. Unique risks are verified manually using modern techniques and all results are documented in detail along with guidance on changes to withstand similar classes of attack going forward.

Benefits

Comprehensive Mobile Assessment

Assesses your application design, functional dependencies, and implementation to ensure the security of critical operational assets and customer data

Industry Leading Knowledgebase

Leverage extensive security expertise so you're always prepared to combat the latest mobile application attack trends

Realistic Security Exercises

Measure the resilience of your mobile presence with accurate simulation of real world attack scenarios

"Ultimately, the pace at which mobile is evolving in the enterprise is completely unique, changing how businesses have to think about security. Companies need to establish trust and security in a world where they have less and less control—over devices, over apps, and their users."

Adam Ely
COO, Bluebox

Mobile Application Testing Process
