STAY SECURE
INFRASTRUCTURE SECURITY ASSESSMENT

The increasing complexity of networks and infrastructure makes it difficult to create a comprehensive security snapshot for your organization. Deja vu Security can help you evaluate the risk in your organization's IT infrastructure, technology assets, cloud deployments, and networks. We assess your organization for common and new threats that put the day-to-day operations of your business at risk.

Concerns

- IT hardware and software assets are difficult to track, patch, and maintain
- No organization is an island. Integrations with vendors, cloud services providers, and other networks increase exposure to attack
- Attacks continue to become more sophisticated as attackers adapt to endpoint and managed IT services
- Verifying the integrity of the underlying technologies that your business relies upon are crucial to maintaining security

Solution

Deja vu Security performs a comprehensive security assessment of your organization's assets, software, networks, cloud deployments, configurations, vendors, and policies.

Our security snapshot helps you understand your organization's comprehensive risk footprint. After compiling your security report, Deja vu Security helps you design a proactive mitigation plan. This actionable plan lays out and prioritizes attainable milestones that result in a more secure organization.

Benefits

Comprehensive Organizational Security Assessment
Assesses your IT infrastructure, devices, networks, cloud deployments, and security of critical operational assets and databases
Identify Third Party Weaknesses
Discover and prevent weaknesses introduced to your systems by vendors or cloud services providers

Industry Leading Knowledgebase
Leverage extensive security expertise so you're always prepared to combat the latest attack methods

Realistic Security Exercises
Measure your organization's readiness with realistic red team attack exercises

Create Attainable Security Milestones
Improve your organization's security over time by laying out comprehensive security goals

"Some of the more obvious results of information security failures include reputational damage, placing the organization at a competitive disadvantage, and contractual noncompliance. These impacts should not be underestimated."
