

# M&A SERVICE

## POST MERGER & ACQUISITION ASSESSMENT

Integrating a new partner into an organization puts the parent organization at risk of attack. Quickly and comprehensively assessing this increased risk post-acquisition should be a top priority. Deja vu Security assesses organizations' security maturity, infrastructure, technology assets, cloud deployments, and networks for common and new threats that put the acquiring company's business operations at risk.

### Concerns

- Immediately rolling out a risk mitigation strategy after an acquisition is critical to maintaining organizational integrity
- Lost institutional knowledge of the target's networks puts the acquiring organization at risk
- Attackers continue to develop more sophisticated attack methods targeting infrastructure, devices, deployments, and networks
- No organization is an island. Acquisition targets introduce risks from their internal network as well as through their partners' or vendors' networks

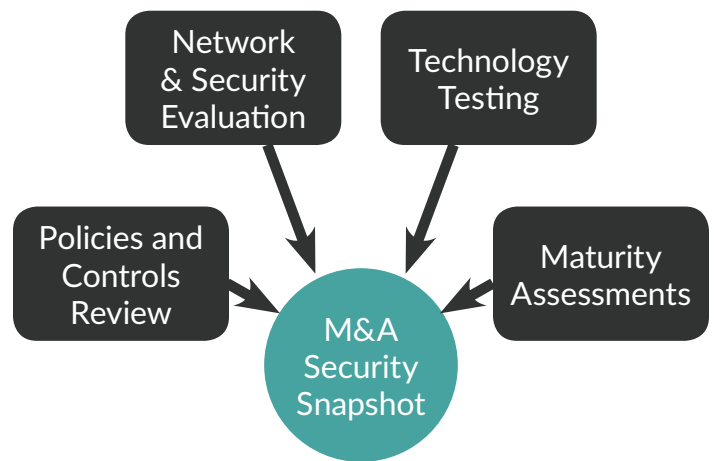

### Solution

Deja vu Security helps companies who recently acquired an organization gather and understand the risks introduced by onboarding an acquisition target into their network. We assist in developing a comprehensive risk mitigation strategy and road map, ensuring a timely and secure integration for both organizations.

We discover vulnerabilities across the acquiree's infrastructure, assets, deployments, policies, and networks.

Deja vu Security is an expert in technology and partner integrations, making us an ideal candidate for evaluating the security challenges of integrating potential acquisition targets into your systems.

### Secure Mergers Process

### Benefits

#### Comprehensive Vendor Assessment

Assesses the target's networks, devices, deployments, and security policies

#### Industry Leading Knowledgebase

Leverage extensive security expertise so you're always prepared to combat the latest attack methods

#### Actionable Roadmap

Evaluate and mitigate risks of integrating a new organization

---

*"In larger companies with more complex IT ecosystems, just going through [an M&A IT analysis] will also likely reveal redundancies or outdated applications that should be retired and extraneous processes that are driving inefficiency."*

Katie Bien  
Sr Manager, Deloitte
