## SECURE MERGERS & ACQUISITIONS

Integrating multiple organization's IT infrastructures after a merger or acquisition raises several security challenges for IT staff. Evaluating and managing risk of infrastructure, technology assets, cloud deployments, and networks is crucial to ensuring organizational integrity. Deja vu Security assesses organization's critical infrastructure for common and new threats that put the acquiring company's business operations at risk.

### Concerns

- Securely combining multiple organization's infrastructures is a complex task requiring deep understanding of threats and effective management of the project
- Attacks continue to become more sophisticated as attackers adapt to endpoint and managed IT services
- No organization is an island. Acquisition targets introduce risks from their internal network as well as through their partners' or vendors' networks
- Lost institutional knowledge and understanding can put systems at risk

### Solution

Deja vu Security will help you identify, understand, and mitigate the risks related to integrating an acquisition target into your network. Our evaluation creates a comprehensive security snapshot that examines the target's infrastructure, deployments, policies, and vendor integrations.

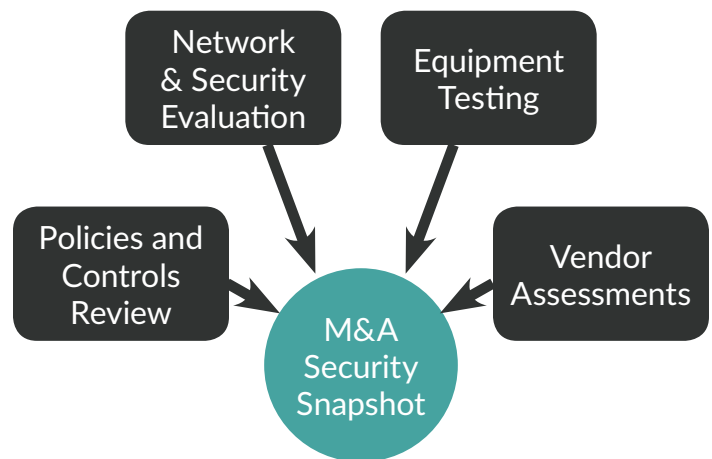

We help you understand vulnerabilities and assist in developing risk mitigation strategies. The security practices that we introduce enable a secure and efficient merger of both organizations.

Deja vu Security is an expert in technology and partner integrations, making us an ideal candidate for evaluating the security challenges of integrating potential acquisition targets into your systems.

*"It is vital to establish the maturity of cybersecurity systems of a target before the purchase takes place and examine if the company performs penetration testing, security compliance process validation and regulatory control reviews."*
